SKILLS

Languages:	Python, C++, C, Java, JavaScript, HTML, CSS
Frameworks/Libraries:	Tailwind CSS, Nodejs, Flask, Pandas, NumPy, Scikit-learn, React
Tools/Platforms:	Git, GitHub, MySQL, VS Code, Postman
Soft Skills:	Problem Solving, Leadership, Team Collaboration, Adaptability

PROJECTS

PhishGuard – ML-Based Phishing URL Detector | Python, Scikit-Learn, Feature Engineering | Github Nov' 2025

- Engineered an ML-driven phishing detection pipeline by extracting lexical, domain-based, and statistical features from raw URLs for robust threat identification.
- Optimized multiple machine learning models (Logistic Regression, Random Forest, SVM) through cross-validation, scaling, and feature refinement to achieve **97% accuracy**.
- Integrated the final prediction engine into a real-time classification workflow capable of evaluating suspicious URLs for security applications

Intelligent CPU Scheduler Simulator | C++, OS Algorithms, Gantt Visualization | Github Apr' 2025

- Constructed an interactive simulator supporting FCFS, SJF, Priority, and Round Robin with real-time Gantt chart generation.
- Integrated queue handling, process lifecycle visualization, and automated metrics for waiting, turnaround, and response times.
- Designed a modular architecture enabling seamless addition and comparison of new scheduling algorithms.

Flask Blog Platform | Flask, SQL Alchemy, Jinja2, HTML/CSS | Github Feb' 2025

- Developed a full-stack blogging platform with SQL Alchemy ORM, secure authentication, and session-based access control.
- Delivered complete CRUD operations for posts within a clean, mobile-responsive UI built using HTML/CSS + Jinja2.
- Organized the backend using MVC-style modular components to ensure scalability and maintainable code structure

TRAINING

CSE Pathshala | Advanced Python for Machine Learning Jul' 2025

- Completed 35+ hours of live training focused on advanced Python concepts used in data handling, preprocessing, and model building.
- Learned and practiced essential Python libraries, including Pandas, NumPy, Matplotlib, and Scikit-learn for implementing ML workflows.
- Built multiple mini-projects to apply concepts such as data cleaning, feature extraction, and implementing basic machine learning models.

CERTIFICATES

- Programming Using C++ | Infosys Springboard Jul' 2024
- Advanced Python for Machine Learning | CSE Pathshala Jul' 2025

ACHIEVEMENTS

- Solved **500+ problems** across LeetCode, GFG, and HackerRank, strengthening expertise in DSA, problem-solving, and competitive programming. Nov' 2025 - Present
- Earned a **5-star rating** on HackerRank in C++, demonstrating strong command of programming fundamentals and algorithmic problem-solving across timed challenges. Nov' 2025
- **Max Rating 1505** in LeetCode Contest, reflecting advanced competency in algorithmic challenges including greedy, binary search, and mathematical optimizations Nov' 2025

EDUCATION

Lovely Professional University Phagwara, Punjab
B.Tech in Computer Science (Artificial Intelligence & Machine Learning); ***CGPA: 8.28*** *Aug' 2023 – Present*

A.N. International School Bijnor, Uttar Pradesh
Intermediate; ***Percentage: 84%*** *Mar' 2021– May'2022*

A.N. International School Bijnor, Uttar Pradesh
Matriculation; ***Percentage: 86%*** *Mar' 2020– Mar'2021*
